# Dick's Results

Result

(<https://twp.artemis-analytical.com/results>)

Hi Dick,

We've had a good look at your water and here's what we've found.

Compare

(<https://twp.artemis-analytical.com/dashboard>)

Your water is classified as hard, it contains high levels of calcium and magnesium. The good news is that hard water is generally healthy for the body and helps provide dietary intake of essential minerals. However, hard water can form scale which can damage appliances such as washing machines and dishwashers. Hard is considered less pleasant to bathe in and may aggravate skin conditions such as eczema.

Knowledge

(<https://artemis-analytical.com/twp/dev/knowledge2/index.html>)

Great news, we've not found any evidence of contamination. Your drinking water is in great shape.

As your water is classed as Hard you might consider fitting a water filter tap or using a water filter jug. You should ensure that your dishwasher is set to use the correct level of salt for water hardness of 170mg/L Calcium Carbonate hardness. If you prefer to bathe in soft water or you suffer from a skin condition such as eczema you might also consider having a water softener fitted.
